

14" PITCHED HEADSTOCK

The 14" pitched headstock on the XR series offers several advantages. The strings are more securely tensioned over the nut, resulting in fewer string buzz problems on the bass strings. The string action at the nut can be adjusted lower with his design than with conventional designs. When a lock-nut is used, there is far better stability throughout, and lower register chord or single note playing is greatly improved.

BODY

The XR series body was designed to meet the demands of musicians wanting maximum performance and output from a smaller and lighter guitar, yet retaining excellent balance.

TRS-101 TREMOLO

The new TRS-101 Tremolo System has many innovations, resulting in easier string changing, fewer broken strings, and greater stability during prolonged use. Tuning and in-tona-

tion problems have been eliminated, allowing the player to "Dive Bomb" with confidence.

PICKUPS

The XR-CT-3 and XR-DX-3 models feature two single coil CS-2 pickups and one CH-2 humbucking pickup. This combination of high output pickups offers the player a wide array of sounds to choose from. The XR-ST-3 comes equipped with two CS-1 single coil and one CH-1 humbucking pickups. Allowing a great variety

of tonal variation.

ACTIVE CONTROL

The XR-CT-2A and XRB-2A have active tone control designed to work in conjunction with their high impedance passive pickups. This circuit provides both high and mid frequency boost, giving the player a wider choice of sounds.

BODY

Designed with the hard rock and heavy metal bassist in mind, the XRB "Square Body" shape combines durability, playability, and excellent tonal response with "The Look" for today's players.

PICKUPS

The XRB Bases are equipped with Aria's CP-1 and CJ-1 ceramic magnetic pickups. These pickups provide outstanding frequency response and a wide variety of tonal variations from which the player may choose his own unique sound.
